

# Westvac Industrial Ltd.

*A Commitment to being  
**GREEN** & Sustainable*

Westvac Industrial Ltd.  
is built on values,  
powered by integrity,  
and driven by a relentless  
commitment to quality service.

*"We offer products which are sustainable, energy efficient, and have a minimal impact on the environment and the communities our customers operate in."*

"Protecting the environment is critical to the sustainability of our planet and the conservation of precious natural resources. TYMCO recognizes its responsibility to that sustainability and continually strives to reduce the environmental impact of the sweepers we build and the work we do."

– Maxi trucks are designed and built to maximize service and emergency response efficiency. Safety is of the utmost priority when it comes to saving lives.

FORCE / PRIDE

F – Faith & Fun

O – Openness

R – Respect

C – Courage

E – Endurance

"Environmental sustainability with a pothole patcher is about preserving the natural environment, community by community.

Falcon contributes to the development of environmentally sustainable communities by building asphalt maintenance equipment that allows street repairs to be performed with recycled asphalt. Using recycled asphalt to repair streets reduces landfill use and disposal costs, conserves aggregate and petroleum resources, and eliminates the need for temporary winter repairs."

"Stertil-Koni has recently introduced a new generation of its best-selling, "green" hydraulic mobile column lift, EARTHLIFT™, now with a lifting capacity of 18,500 lbs. per column. EARTHLIFT has been recognized as the industry's first hydraulic "green" mobile column lift and is designed with both performance and the environment in mind."

Eco System – Summary of New Features:

– Environmental Friendly Hydraulic Fluid. This hydraulic fluid is non-toxic and inherently biodegradable – therefore non threatening to the ecosystem in the event of a fluid leak.

– 33% Reduction in Engine Operating Speed. This means lower fuel costs, a safer quieter environment for operators and neighborhood residents while cleaning sewers.

– ¾" Thick Duraprolene Water Tank Walls Creates a more durable and robust water tank which will last the lifetime of the jetter.

– Reduced Environmental Impact Production Process.
