

Westvac Industrial Ltd.

*A Commitment to being
GREEN & Sustainable*

Westvac Industrial Ltd.
is built on values,
powered by integrity,
and driven by a relentless
commitment to quality products
and service.

"We offer products which are sustainable, energy efficient, and have a minimal impact on the environment and the communities our customers operate in."

"Protecting the environment is critical to the sustainability of our planet and the conservation of precious natural resources. TYMCO recognizes its responsibility to that sustainability and continually strives to reduce the environmental impact of the sweepers we build and the work we do."

HMA sells advanced firefighting systems to professionals who need to mitigate emergencies faster than possible with traditional pumps. Unlike traditional pumps, HMA uses over 90% of the water droplet. This allows response teams to fight fires with 20 gallons or less that normally would take hundreds, if not thousands, of gallons to stop. HMA's technology also enables municipalities to have a better ROI on their water supply and significantly reduces the amount of damage typically seen with large volumes of water used during fire attack.

HOLDER TRACTORS INC.

"Holder has always been very conscious of the effect its tractors have on the environment. As a result, we use Tier 4 engines that comply with the latest emission standards minimizing carbon monoxide pollution. All hydraulic oils used in Holder Tractors are 100% biodegradable and safe for the environment. We also only sell vacuum sweeper units that are PM10 Certified!"

Our mission is to satisfy the exigencies of our clients by manufacturing reliable, high performance products and ensuring constant ongoing improvement, thus contributing to the safety and efficiency of the firefighters themselves.

The future goal of waste management is zero waste being deposited into landfills. With an eye toward that future, New Way® leads the industry with the introduction of the first auger-driven organics collection truck in North America, the ROTO PAC®.

"Steril-Koni has recently introduced a new generation of its best-selling, "green" hydraulic mobile column lift, EARTHLIFT™, now with a lifting capacity of 18,500 lbs. per column. EARTHLIFT has been recognized as the industry's first hydraulic "green" mobile column lift and is designed with both performance and the environment in mind."

The first mission of Drago-I.S.I is to add a tool to fight fires, but in a very innovative way regarding approach and fire control. Directly, Drago-Engineering Company and Fire Safety priorities are:

Protect human lives | Reduce the risk of accidents | Reduce operating costs | Reduce water waste | Reduce environmental impacts | Preserving living heritage

Companies are increasingly being judged, and also evaluate themselves in relation to different aspects such as sustainable development. This orientation and social responsibility have become strategically important goals for existing businesses. At Drago- I.S.I., sustainability is firmly rooted in the company's policy and is systematically implemented in internal structures and processes

As we see more and more emphasis on "green" initiatives to reduce impact on the environment, Vac*Con® is proud to be a leader in the industry. Our forward thinking and custom manufacturing techniques allow us to put environmental impact at the forefront of our diverse processes. We have been manufacturing products used to assist public and private entities in maintaining water collection systems and treatment facilities for more than 30 years. We can all help assure that the world's potable water supplies are preserved for future generations simply by not wasting or polluting this precious resource.
